Andrew Gill of Brett Landscaping looks at how durability can be built into heavy trafficked areas - 32

Clarence Dock, Leeds

Marshall is the UK's market leader in the manufacture of floral landscaping products. The organisation has supplied some of the most prestigious landscapes in the UK - and has in fact paved entry property on the Manchester Canal Canal in 1880. Marshall's supplies integrated floral landscaping products in all sizes products for the domestic market. Marshall's strives to improve sustainability for everyone by using its expertise to create integrated landscapes that promote well-being, from using heavy tread stone and paving products that alleviate flood risks, to creating innovative anti-carbonat about furniture.

Challenge
Clarence Dock in central Leeds is the City's largest mixed-use urban waterfront development, incorporating over 1.2 million sq. ft of attractions including restaurants, retail, bars, shops, a hotel, casino, office space and residential apartments. The development for The Clarence Dock Company, has truly transformed the City's waterfront area creating a modern, vibrant and innovative urban destination which hopes to receive 1.5 million visitors each year.

Marshall was pleased to be involved with the project right from the start being to create a seamless integration of design, product, material and processes which would eventually see the creation of a unique flagship development in the heart of bustling Leeds.

The challenge was to produce an elegant yet durable, modern landscape for this prestigious development that blended into Leeds' Cityscape.

Solution
Marshall used a fusion of bespoke and standard products which were supplied over a two year period. Where standard forms were insufficient in meeting the client's needs, bespoke specifications were developed providing innovative solutions.

Marshall not only supplied their market leading concrete, granite and fibreglass paving and kerbing solutions to the scheme, they also installed bespoke granite seating, planters and litter bins to complete the look through Marshall's Street Furniture Division. Marshall's technical experts also designed a bespoke slot drainage solution for the scheme which incorporated increased depth to cater for varying construction build-up and detailing and schedule documents were created to assist efforts on-site.

Working closely with Shepherd Construction's site team, Marshall provided rapid engineering responses, design advice, installation advice and product schedules to aid the contractor's efforts. With a mix of change in site, Marshall's carefully planned material deliveries to suit the contractor using timed deliveries and stock holding which proved critical in meeting the Contractor's requirements.

Chris Davies, Key Contracts Manager at Marshall, believes that the project has provided an ideal opportunity to showcase how Marshall can add value to a contractor's business and site.

"We have deployed a variety of resources from across our business to assist Shepherd's efforts on-site at their Leeds office and Head Office, in Leeds. From site engineering to site operations, we have assisted throughout in their efforts in meeting their quality and time targets."

Benefits
The development was finished ahead of schedule and is an excellent example of how Marshall's products can be used to ensure high quality and finished landscape and paving solutions. The possibility of advice and support at every stage of the project ensured suitable products were selected and installed to the clients satisfaction creating an aesthetically pleasing and durable hard landscape.

It was a testament to the high quality of the development and partnership working with the client, contractor and consulting engineers Barr Haggard Lamb and Cardman Associates that the project won the Best in Quality Award in the Year Built category of the West Yorkshire Built to Quality Awards which recognise and reward good quality building practices across a wide range of categories.
